LAKE TAHOE BASIN WATER USE INVENTORY 2012

STATE OF NEVADA
DEPARTMENT OF CONSERVATION AND NATURAL RESOURCES

By: Karl Eitenmiller, P.E.
Staff Engineer IV

ABSTRACT

Lake Tahoe is the primary source of potable water for the communities within the Tahoe basin. The Nevada portion of the Lake Tahoe hydrographic basin is bounded by the California-Nevada State line to the west and south, and the Tahoe Rim to the east and north. It contains several large and small communities including Stateline, Kingsbury Grade, Round Hill, Zephyr Cove, Skyland, Cave Rock, Logan Shoals, Glenbrook and Incline Village. The water purveyors that supply these communities divert the largest portion of potable water within the Lake Tahoe Basin. The following table shows the distribution of the total permitted water rights versus actual use and itemizes it by manner of use.

Manner of Use	Total Permitted Use	2012 Use
Municipal and Quasi-Municipal	10,698	6,318
Domestic	185	115
Irrigation and Stockwater	1,612	519
Recreation	1,056	455
Commercial	441	35
Instream Flow	614	0*
Environmental	56	0*
Domestic Wells	---	53
Transbasin Deliveries	5,753	0**
Total	20,415	7,495

*Use for Instream Flow and Environmental permits were set to zero in the table, as the water is not consumed.

** Appropriations in the amount of 5,753 acre-feet annually for irrigation and municipal purposes are included in the table for the permitted use and in the 20,415 acre-feet total but are not included in the 2012 use because they are transbasin deliveries excluded from Nevada's allocation pursuant to Article V, paragraph E of the California-Nevada Interstate Compact and PL 101-618.

In the Nevada portion of the Lake Tahoe hydrographic basin, the total quantity of permitted, certificated, and vested water rights equals **20,415** acre-feet per annum. The total quantity of water diverted and placed to beneficial use for 2012 equaled **7,495** acre-feet.

The total consumptive use allocated for the Nevada portion of the Lake Tahoe Basin is 11,000 acre-feet. This allocation was determined by the California-Nevada Interstate Compact as ratified by the Nevada Legislature in 1971. The Interstate allocation of all waters in the Lake Tahoe Basin may later be confirmed by Public Law 101-618. In 1990, the law was ratified by Congress and signed by the President and will not become effective until all of the conditions of that law are satisfied. The Compact also states that administration of the water rights and usage of Nevada's portion of the Lake Tahoe Basin be carried out by the State Engineer.

This report will explain in detail the quantities provided above and give a thorough explanation of pertinent provisions of the California-Nevada Interstate Compact. Other ancillary information will also be provided.

LAKE TAHOE HYDROGRAPHIC BASIN
WATER USE INVENTORY

2012

By: Karl Eitenmiller, P.E.
Staff Engineer IV

PURPOSE

The purpose of this report is to estimate the amount of water diverted from surface and groundwater sources for the different uses within the Nevada portion of the Lake Tahoe hydrographic basin (hereinafter referred to as Lake Tahoe Basin). The need for better management of the water resource due to increasing demand and the need to comply with provisions set forth by the California-Nevada Interstate Compact Commission necessitates the production of this report. This study was based on information available in the State Engineer's office in Carson City, Nevada on all uses of water in the Lake Tahoe Basin, permitted or otherwise. Personnel of the State Engineer's office compared and verified information in the office then conducted field investigations to further substantiate diversion information. Information obtained from this study and field investigation is presented in this report in support of the total water use estimates. Other information on major users and approximation of domestic well pumpage is also presented in this report.

INTRODUCTION

The Lake Tahoe Basin is situated in the Sierra Nevada Mountains about thirty miles southwest of Reno, Nevada and about ninety miles east of Sacramento, California. The total surface area of Lake Tahoe is approximately 191 square miles and the area of its watershed is approximately 315 square miles. Approximately one third of the lake and watershed areas lie within the State of Nevada.

The lake and the surrounding mountains create an environment that provides year-round recreation of all types and outstanding views and scenery. Some of the many sports and activities available in the Lake Tahoe region are alpine, nordic and water skiing, boating, hiking, horseback riding, golfing, sightseeing, gaming, in addition to the many dining and leisure activities offered in the area.

The multitude of recreation and leisure activities in the Lake Tahoe area has created a large draw for tourists and modern day development has been quick to keep pace with the rising number of visitors in the area. The year-round and part-time resident population has also been on the increase over the last couple of decades. Today the Lake Tahoe area receives over 2 million visitors a year who travel to over twenty-five population centers in the area. The current population within the entire basin is now over 57,000 people. This increase in tourism and population has placed a heavy burden on the basin's water resources.

SCOPE OF INVESTIGATION AND REPORT

The Nevada Legislature initially ratified the California-Nevada Interstate Compact in 1969. California then amended the compact and ratified it on September 19, 1970 (Ch 1480, CA STAT 1970). Nevada ratified the compact again on March 5, 1971 with amendments (NRS 538.600). The Compact Commission had been holding negotiations on the Compact from 1955 until it's ratification by both states. To date, Congressional approval of the Compact has not occurred.

The Compact sets forth provisions for the equitable apportionment of waters between the two states. The provisional annual allocation of the waters of the Lake Tahoe Basin for the State of Nevada and for the State of California is 11,000 and 23,000 acre-feet respectively for use within their portions of the Lake Tahoe Basin. **Water collected after its use e.g. effluent, does not count against the states allocation and may be exported out of the basin.** The Office of the State Engineer administers the State of Nevada's portion of the Lake Tahoe Basin water. On November 16, 1990, Public Law 101-618 was passed, reaffirming in section 204 (b)(1) the quantities of allocation described above. However, several conditions must be met before P.L. 101-618 goes into effect and are not described herein. Both the California-Nevada Interstate Compact and PL 101-618 exclude transbasin deliveries existing prior to December 31, 1959.

Information for this study was collected in two stages. First, information on file at the State Engineer's office regarding all appropriated, adjudicated and vested water rights in the Nevada portion of the Lake Tahoe Basin was collected along with any other information on water uses within the Lake Tahoe Basin. This information was then examined to determine the total allocations on file in the Nevada Portion of the Lake Tahoe Basin. All of the water right data

was then cataloged so that it could be sorted by owner of record, manner of use, and location of the point of diversion.

Second, field investigations were conducted to compare the actual diversions of water with the amount of appropriated, adjudicated and vested water determined in the initial study of records.

The data collected in these investigations consisted of:

1. Source of water (lake, stream, spring, underground or other)
2. The amount of water used, determined by flow meter readings or best estimate
3. The place and manner of use
4. The number of dwellings or units served
5. Current owner of the water right
6. Whether the current use is seasonal or year-round
7. Whether or not the water is being put to beneficial use

A majority of the water used at Lake Tahoe is delivered to the user by a general improvement district or by water companies under the jurisdiction of the Public Utility Commission of the State of Nevada. A few cooperative non-profit associations, which were formed to distribute water to a group of users, remain while some isolated dwellings continue to receive water from privately owned systems. Most diversions of water for municipal or quasi-municipal uses of water are equipped with a totalizing meter and those readings provided field investigators with the most readily available information on the amount of water usage from a particular diversion.

Some quasi-municipal diversions and most domestic, irrigation, and other uses were not equipped with totalizing meters. Other permitted uses include storage, power, environmental and 'other'. In the case of quasi-municipal and domestic water rights, estimates of water usage were made by counting the number of units or dwellings hooked up to a particular diversion and determining if the place of use received year-round or seasonal use. If the water right in question was for irrigation and did not have a meter or other measuring device, investigators determined if the cultural acreage shown on maps, available in the State Engineer's Office, approximately matched what was currently being irrigated. If the irrigated acreage matched the cultural map, the amount of water used was determined to be equal to the amount stated in the water right. If only a portion of the land was irrigated, investigators estimated how much acreage was actually irrigated based on comparisons made with the cultural maps. If the water right in question was for other uses and did not have a meter, investigators determined if water was still being supplied to the use described in the permit itself. If water was still being supplied, investigators assigned a water use estimate based on the amount issued under the permit.

Investigators also paid special attention to the quantity of water rights permitted out of the same point of diversion and to the places of use for each of the water rights so that the supplemental nature of the water rights would be fully considered.

Water rights may be acquired by appropriation in Nevada by two separate actions. The first type of action is that of a claim of vested rights. Vested water rights (pre-statutory) were appropriated by simply diverting the water and placing it to beneficial use. Filing a Proof of Appropriation in the Office of the State Engineer recognizes these rights. The Proof of Appropriation provides evidence that the water in question had been beneficially used prior to

March 1, 1905 for surface waters, prior to March 22, 1913 for artesian groundwater and prior to March 25, 1939 for percolating groundwater. The Proof of Appropriation, once accepted by the State Engineer's Office, becomes the claim of vested right. The role of the State Engineer is to determine the validity, limit and extent of the claim. In some cases, the court in the general adjudication process has confirmed these vested water rights. The claimant can continue to use the water unless a court of law determines otherwise. The second type of action is through the permitting process outlined in Nevada Revised Statutes (NRS) 533 and 534.

In Nevada, a water right may be bought and sold separately as real property independent of the land it is appurtenant to. Transfers of ownership, when properly filed, are recorded in the State Engineer's Office, and, any change in the point of diversion, manner or place of use of the water right is subject to the provisions of NRS 533 and 534.

BASIC DATA AND PROCEDURES

In the Nevada portion of the Lake Tahoe Basin, the total quantity of permitted, certificated and vested water rights equals **20,415** acre-feet per annum (this includes 5,753 acre-feet of transbasin deliveries). The total quantity of water diverted and placed to beneficial use within the Lake Tahoe basin in 2012 was **7,495** acre-feet. The following table summarizes this water use data and itemizes it by manner of use.

Manner of Use	Total Permitted Use	2012 Use
Municipal and Quasi-Municipal	10,698	6,318
Domestic	185	115
Irrigation and Stockwater	1,612	519
Recreation	1,056	455
Commercial	441	35
Instream Flow	614	0*
Environmental	56	0*
Domestic wells	---	53
Transbasin Deliveries	5,753	0**

*Use for Instream Flow and Environmental permits were set to zero in the table, as the water is not consumed.

** Appropriations in the amount of 5,753 acre-feet annually for irrigation and municipal purposes are included in the table for the permitted use and in the 20,415 acre-feet total but are not included in the 2012 use because they are transbasin deliveries excluded from Nevada's allocation pursuant to Article V, Paragraph E of the California-Nevada Interstate Compact and PL 101-618.

Effluent storage is specifically excluded from Nevada's 11,000 acre-foot allocation, as it is a secondary use of the diverted waters of the Lake Tahoe Basin and therefore not included in the permitted total. After subtracting out the pre-statutory 5,753 acre-feet transbasin diversion from the 20,415 acre-feet total Lake Tahoe Basin water rights, 14,662 acre-feet of permitted water rights remain (as compared to Nevada's 11,000 acre-feet allocation). These totals for all manners of use are further described as follows:

Municipal and Quasi-Municipal Use

The single largest use of water in the Lake Tahoe Basin is municipal and quasi-municipal. Seven purveyors hold the majority of the permits issued for municipal and quasi-municipal use. From north to south these purveyors are:

1. Incline Village General Improvement District (IVGID)
2. Glenbrook Water Cooperative (Glenbrook)
3. Logan Creek General Improvement District (LCGID)
4. Douglas County (Uppaway, Cave Rock/Skyland, Zephyr Cove)
5. Round Hill General Improvement District (RHGID)
6. Kingsbury General Improvement District (KGID)
7. Edgewood Water Company (Edgewood)

The purveyors themselves supplied all information on diversion totals for their individual permits. Meter readings were taken by personnel of the State Engineer's Office during field investigations to verify these totals.

Glenbrook	288	312
LCGID	19	13
Douglas County	777	696
RHGID	486	242
KCHD	1,747	1,029
Edgewood Water Co.	1,685	769

IVGID supplies water for the community of Incline Village and the Crystal Bay area. IVGID diverts water from Lake Tahoe from a single intake located at Burnt Cedar Beach and conveys it to residential and commercial units within its service area. IVGID currently holds 4,270 acre-feet of municipal water rights. During the calendar year of 2012, IVGID diverted 3,260 acre-feet of water. IVGID also has a permit for 200 acre-feet for recreation (snowmaking) purposes. Under the terms of the snowmaking permit, only 20% of the water diverted for snowmaking is considered consumptive and is accounted for under IVGID's existing water rights. A total of 121 acre-feet were used for snowmaking for the calendar year of 2012, 20% (24.2 acre-feet) of which is considered consumptive, therefore, IVGID's total water use for 2012 is 3,163 acre-feet.

Glenbrook supplies water from one intake in Lake Tahoe for residences in the Glenbrook Bay area and one fire station on Hwy 50 above Glenbrook. The golf course located in Glenbrook holds its own water rights under the name of The Glenbrook Company and supplies the water through its own system. Glenbrook has a new intake in Lake Tahoe with an ozone treatment facility that replaced the existing chlorination facility. Glenbrook currently holds 288 acre-feet of water rights. During the calendar year of 2012, Glenbrook diverted 312 acre-feet of water.

LCGID supplies water from three wells in the Logan Creek area for twenty-three single-family residences. LCGID owns 15 acre-feet of water rights to serve these residences. During the calendar year of 2012, LCGID diverted 13 acre-feet of water. LCGID also owns 4 acre-feet of water rights to divert from Logan Shoals Creek No. 2 (aka South Logan Shoals Creek). However, during the calendar year of 2012, LCGID did not divert any water under its surface rights.

Douglas County supplies water from Lake Tahoe for the areas of Uppaway, Cave Rock, Skyland and Zephyr Cove. Private water companies respectively named Uppaway Water Company, Cave Rock Water Company, Skyland Water Company and Zephyr Cove Water Utility District previously supplied these four areas. Douglas County now serves these areas from three intakes and distribution systems. Douglas County currently holds 777 acre-feet of water rights. During the calendar year of 2012, Douglas County diverted 696 acre-feet of water.

RHGID supplies water from Lake Tahoe from one intake for residences and commercial businesses in the Round Hill area. RHGID currently holds 486 acre-feet of water rights. Included in this 486 acre-feet is a water right owned by KGID in the amount of 3.92 acre-feet that is diverted from RHGID's intake to serve a portion of KGID's service area. During the calendar year of 2012, RHGID diverted 242 acre-feet of water. This figure includes an unspecified amount of water that was conveyed to KGID's place of use under their water right.

KGID supplies water from one intake in Lake Tahoe and from one well on Kingsbury Grade to residences and businesses in the Kingsbury Grade area. KGID currently owns 1,747 acre-feet of water rights. All of this can be used to divert out of its lake intake and up to 290.3 acre-feet of water rights can be diverted from its one active well, but the total cannot exceed 1,747 acre-feet. The State of Nevada 4-H Camp owns 29.15 acre-feet of water rights to divert out of KGID's lake intake. KGID also owns 3.92 acre-feet of water rights to divert from RHGID's intake and convey to a portion of KGID's service area. KGID's diversion total from RHGID's intake is included in RHGID's diversion total and not KGID's. During the calendar year of 2012, KGID diverted a total of 1,029 acre-feet of water from its lake intake. This figure includes an unspecified amount of water that was conveyed to the State of Nevada 4-H Camp's places of use.

KGID also owns 751.22 acre-feet of water rights, which is included in the total of 1,747 acre-feet, and can be pumped from their other wells in the Kingsbury Grade area.

Edgewood supplies water from one intake in Lake Tahoe for casinos, businesses and residences in the Stateline area. Water for the Edgewood Golf Course is supplied from an intake from Edgewood Creek under a separate set of water rights issued for recreational (see recreation use p. 15) purposes equaling 450 acre-feet of water. Edgewood currently owns or controls 1,685 acre-feet of water rights for quasi-municipal use in its service area. During the calendar year of 2012, Edgewood diverted 769 acre-feet of water.

Other Quasi-Municipal Uses

Many quasi-municipal water rights owned by persons or entities serve a small number of dwellings or businesses from one diversion. The total amount of water appropriated for quasi-municipal use in the Nevada portion of the Lake Tahoe Basin other than those listed above is 1,426 acre-feet. During the calendar year of 2012, personnel from the State Engineer's office estimated the total amount of water diverted for quasi-municipal use at 94 acre-feet. This figure does not include any water diverted by the major purveyors listed above.

Domestic Use

Permitted

During the calendar year of 2012, approximately 115 acre-feet water was diverted for domestic use directly from Lake Tahoe under eighty three individual water rights which total 185 acre-feet annually. Some of these water rights are permitted for one point of diversion to serve one single-family residence. Many of these water rights are no longer in use and the dwellings receive water from a water purveyor (See appendix, any domestic water right with zero use

receives water from a purveyor). Of these active water rights, approximately twenty had totalizing meters installed. Therefore, the amount of water specified under each water right that showed evidence of use in 2012 was added to determine the total diversion of appropriated domestic water use from Lake Tahoe.

Domestic Wells

A search of the well log database at the State Engineer's office identified 94 domestic wells in the Nevada portion of the Lake Tahoe Basin. An estimate of 500 gallons per day (gpd) was used to calculate a total diversion from domestic wells at 53 acre-feet.

Irrigation and Stockwater Use

Approximately 122 acres of land was irrigated in the Lake Tahoe Basin based on maps on file at the State Engineer's Office. This acreage exists in the Glenbrook Creek, Zephyr Cove Creeks, McFaul and Edgewood Creek areas. Golf courses also create a large demand for irrigation water. However, water used on golf courses has been labeled as either recreational or quasi-municipal use. The water used to irrigate the pastureland in the above areas was decreed under the Glenbrook Creek Adjudication, the Zephyr Cove Creek Adjudication and the Edgewood Creek Adjudications respectively. These adjudications specify a certain acre-foot per acre duty for the irrigated lands. The total amount of adjudicated and appropriated water rights for irrigation and stockwater within the basin is 1,612 acre-feet. Using the duty specified, personnel at the State Engineer's Office calculated the total diversion of water for irrigation use to be 515 acre-feet during 2012.

Included in the irrigation diversion of the streams is the stockwater diversion. There are two stockwater rights on file in the State Engineer's Office for 4.34 acre-feet. The decrees on the streams in the Lake Tahoe Basin specify that the stockwater use is included in the total irrigation diversion.

Recreation Use

One thousand and fifty six acre-feet of water is appropriated for recreational use. These appropriations are for snowmaking at Diamond Peak Ski Resort and Heavenly Valley Ski Resort, irrigation for Edgewood Golf Course, maintenance of water levels in two artificial lakes, and for use at the state parks and campgrounds. The total recreation use for the parks, campgrounds and golf course during 2012 was estimated at 455 acre-feet based on information on file at the State Engineer's office and pumpage reports submitted by Edgewood Golf Course. The water used for snowmaking at Diamond Peak Ski Resort is included in IVGID's pumping total.

Permits 79612 and 79613, issued on October 25, 2011, allow for a total of 592 acre-feet annually of water to be pumped from Lake Tahoe for recreation (snow making) purposes at the Heavenly Valley Ski Resort. The points of diversion under these permits are within the State of Nevada. However, the place of use is within the Lake Tahoe Hydrographic Basin and the California portion of the Heavenly Valley Ski Resort. The 592 acre-feet of water allowed under Permits 79612 and 79613 (which is considered to be 20% consumptive) is a part of the State of California's allocation of water under the California Nevada Interstate Compact. Therefore, this amount of water is not included in the table for the permitted use or in the 20,415 acre-feet total appropriation.

Commercial Use

Four hundred and forty one acre-feet of water is appropriated for commercial use. A portion of this water is accounted under the diversion by municipal providers. The actual amount of water put to beneficial use during 2012 was estimated at 35 acre-feet.

Instream Flow

A total of 614 acre-feet of water rights have been changed to instream flow in the Lake Tahoe basin. These rights are specifically granted for water within streams until the water reaches Lake Tahoe and therefore are not counted in the allocation of water for Nevada.

Environmental Use

Water rights totaling 56 acre-feet are appropriated for environmental purposes. These water rights are groundwater permits used for site remediation of contaminated ground water. Environmental permits are issued under NRS 533.4373 in conjunction with the Nevada Division of Environmental Protection. The ground water is extracted, treated and either reinjected or discharged into the storm drain system. For the purposes of this report, environmental appropriations were considered to be non-consumptive.
